SHIBinBLACK

WHITE PAPER

SHIBinBLACK

I N T R O D U C T I O N

The flight of SHIBinBLACK starts from the consideration of communities that arise spontaneously in the context of decentralized relations. These communities confirm the nature of the individual who in history has become the protagonist of the greatest social revolutions which, by combining the vital energies arising from the dream of improving human life, have contributed to the progress of humanity.

A progress achieved thanks to the conquest of freedom from the rigid structures of central power. Free to discover his own identity and freeing himself from traditional patterns, man has been able to identify new ways of relating to his fellow men and at the same time solve the problems of all humanity. The path is still long before reaching a model that can be considered perfect, but the successes achieved teach us that the shared strength of the individuals who make up a community is fundamental to change what does not work.

From this consideration it emerges that the interconnection existing between each individual must be continuously developed as it is happening with the exchange of information running on the blockchains.

SHIBinBLACK is born from this consideration. It makes itself available to its community to gather the energies of those who, believing in the decentralization of relationships, combine their energies by dreaming of a single project.

Now we are in a crucial moment of innovation. With a simple click, man is in possession of information in the past held by those who imposed political, educational and financial models with the aim of dominating man.

SHIBinBLACK intends to contribute to the continuous formation of decentralized communities by helping mankind in his constant conquest of freedom and knowledge.

SHIBinBLACK, to facilitate the exchange of information, runs on the BSC blockchain, uniting men and women who, by joining the community, fight every day for the freedom of the individual.

SHIBinBLACK

W H A T   I S *SHIBinBLACK*?

SHIBinBLACK is a computer application called "smart contract". This application incorporates programmed functions in solidity and interacts with software and IT protocols, perfecting its contractual agreements on the advanced platform of Binance Smart Chain. It is on this platform that the clauses of the smart contract are perfected, ensuring that anyone who interacts with it obtains and releases what is agreed in the contract itself.

The *SHIBinBLACK* smart contract code provides for the immediate enabling of trading. The Boolean value of the "trading status" is already set to "true". This means, to guarantee the trading itself, that it cannot be subsequently disabled by the write function provided by the BSC platform. Once the contract has been published and verified on BSC, trading can only start after the addition of liquidity that will initially be initiated between *SHIBinBLACK* and BNB.

W H Y   B I N A N C E   S M A R T   C H A I N

When the development team analyzed the various existing blockchains, they preferred the one on which communities meet more easily thanks to the strong competitiveness of the execution costs of each individual contract. We believe it is essential to facilitate the union of the energies of individuals without burdening them with high costs for their participation in the social life of communities.

SHIBinBLACK 's smart chain intends to interact in the phase of its launch with Binance Coin (BNB) which is the crypto currency of the Binance exchange platform. This virtual currency, over the last year, has aroused wide interest as it is the crypto currency of the largest crypto currency exchange in the world. And it is with the whole world that *SHIBinBLACK* intends to act and make itself known.

W H A T   T H E   S M A R T   C O N T R A C T *SHIBinBLACK* D O E S

SHIBinBLACK in its contract, 10% of all executions of the contract are intended to distribute the crypto currency SHIB to the holders of the Token that tracks the movements of the smart contract. This

SHIBinBLACK

distribution takes place in proportion to the amount of the **SHIBinBLACK** Token held by each individual holder in his personal wallet (eg. Trust wallet or Metamaask).

SHIBinBLACK has in its contract an anti-whale system to avoid alterations (up or down) in the price. In fact, a max transaction of 2.5% and a max wallet of 5% are envisaged.

THE SMART CONTRACT
OF *SHIBinBLACK* IS ANTI - WHALES!

SHIBinBLACK has a limit of 2,5% for each transaction and 5% for each wallet. This limit was established to prevent the so-called "whales" from carrying out transactions with high amounts at each execution of the contract, which could damage, in the event of a transfer, the trading value of the token and therefore the value of each individual holder

THE SMART CONTRACT OF *SHIBinBLACK* IS ANTI – SCAM !

In the **SHIBinBLACK** smart contract, the following "external" functions not been used : fee modification, modification of the max transaction and of the max wallet. This means that the owner cannot change these conditions after the launch of the Crypto, damaging the holders.

AUTOMATIC DISTRIBUTION OF REWARDS

The contract provides for the automatic distribution of rewards in SHIB at each execution of the contractual clauses. The holder does not have to perform any action as it would do with many other smart contracts in circulation that distribute rewards to their holders. The automatic distribution is a

SHIBinBLACK

crucial point of the contract because it avoids that the holders sustain the payment of commissions during the claim phase of the prizes or on Bsc Scan or on applications made available by the team.

T O K E N O M I C S

The Supply is 1,000,000,000.000 tokens that track the smart contract.

95% of this amount is added to the liquidity added to the Pancakeswap decentralized exchange.

5%, which is the maximum transaction amount (see below) provided for by the smart contract, is stored in the team's wallet. Its function will be that of its possible use in favor of marketing initiatives.

F E E

- 10% rewards distribution in XRP;
- 1% liquidity fee (for each transaction, 2% will increase liquidity)
- 5% marketing fee

ROADMAP

1 PHASE
- Website launch
- Twitter launch
- 1,500 telegram members
- Initial liquidity on PCS and locked on MUDRA
- Launch on PANCAKESWAP

2 PHASE
- Plan of marketing
- 5,000 telegram members
- Addition of liquidity on the pairs SHIBinBLACK / BNB
- Usd 500,000 Usd of market capital

3 PHASE
- 7,500 telegram members

SHIBinBLACK

- Listing on Coinmarketcapital and Coingeko
- Usd 1,000,000 Usd of market capital

C O N C L U S I O N S

The team of volunteers has done a great job for the construction and launch of **SHIBinBLACK.** Believing in decentralization will work to create a community that without a direct leader ship can steer **SHIBinBLACK** in its direction.

The team's task, in the initial phase, will be to protect the name and the community from scammers who attack the hopes of each individual every day on the Blockcahin. The smart contract will therefore be verified on the Bsc Scan block chain and verified by https://www.honeypot.is/

Thanks to each of you, without whose participation it would not exist **SHIBinBLACK !**.

….. Now the time has come to contribute to the change. Let's do it !
